

**X-on Response to Remote Code Execution Vulnerability
CVE-2021-44228**

Published: 16/12/2021

A new remote code execution (RCE) vulnerability in the popular open source log4j logging library has been discovered and assigned [CVE-2021-44228](#). Malicious actors who can cause a malicious string to be logged can exploit this vulnerability.

Many companies have been impacted by this vulnerability and the associated vulnerability [CVE-2021-45046](#).

However, after an extensive security audit of the X-on product portfolio, we can confirm that there is no impact from these vulnerabilities.
