

Extensions - Other

As part of the complete, single supplier telecoms solution Surgery Connect provides, we offer Extension packages to cater for any other elements of your current system not covered by the main Extension packages.

Fax Extension

We will port your existing fax lines to us and provide all of the equipment needed in order to provide you with a complete sending and receiving fax solution. There is no need to purchase any new fax machines.

Franking Machine Extension

Many surgeries make use of pre-paid postage franking machines - these machines require an outbound analogue phone line in order to top them up with credit - we will arrange a phone line to be installed to allow you to achieve this.

Alarm Line Extension

If you have an intruder alarm with your current supplier it is likely that this utilises an analogue phone line to notify the local emergency services that it has been triggered. We will supply this line for you as an extension should you require this facility.

Modem Extension

We can also supply you with an analogue line should any part of your surgery require a dial up modem. This allows you to continue operating as you always have without the need to think about updating your technology.
